

We have the latest few months seen that there is big problems for a lot of dealers to maintain correct Voltage on the cars they are to flash. In order to be sure that the Voltage is correct at any given time, have we searched the market for the best Power Supply available. We have found that our supplier of power chargers through several years – Elektron-Bremen – has launched a new Power Supply that is simply fantastic.

Elektron-Bremen has launched their new HS-1000 which is a intelligent power supply approved by all car manufacturers and that works in the whole world, from 110-260 systems. We recommend our OptiCan users to get this power supply as soon as possible. The HS-1000 can be ordered directly from the factory at a cost of about Euro 1000 ex. Vat and shipment when we approve the order as a dealer of us:
