

OPTICAN SCANCAN

!!! The newest VAG Diagnostic System!!!

We are very proud to announce our new software tool!

These car brands are implemented:

Audi / Seat / Skoda / Volkswagen

These protocols are build in:

KWP 1281 / KWP 2000 / CAN / UDS

Also the latest protocols are implemented:

for example is Audi A5 3.0l TDI with the latest protocol implemented!

This is the Outstanding characteristics of ScanCan:

Automatically recognition of protocols

Complete system scan, recognition of all blocked modules

Administration of your own tester information - (e.g. operating number, Importer number, tester number)

Automatically error analysis and recognition

Easy use - Works on any PC or laptop

Network administration is possible (data security), important for large enterprises.

Error memory analysis with option for saving the result!

INFO about ScanCan:

Read and clear of error memory in all modules (all at once)

Read and clear memory in all modules - individual modules

Measured value collection and evaluation

Measured value of block adjustment

Adjustment of various modules

ID information evaluation with parts information

Saves the error codes.

Reprogramming of different modules

Coding of various modules ----- and much more!!!

Our engineers work day and night to develop more functions in the software.

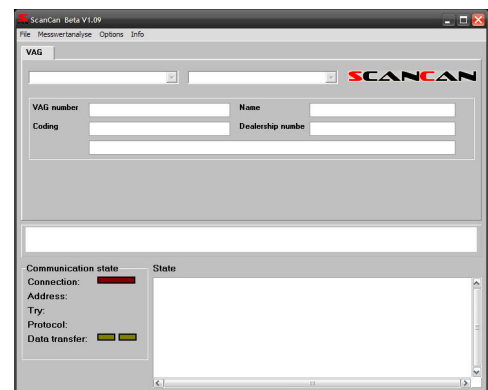

If you have any ideas for improvement of our ScanCan, please let us know and we will check out if it is possible to implement it.

You have complete access to your data for analyzes since the software runs on a normal computer.

At any time you can check the complete software functions by downloading the latest software version from our web site.

The ScanCan software can be used with our OptiCan flasher system:

OptiCan 1 + OptiCan dual firmware V02.21-01.05

UB Tuning
